Base hamel

Definición 1 (Base de Hamel). Sea E un espacio vectorial sobre $\mathbb{K}$, un conjunto $\mathcal{B} \subset E$ es una base de Hamel de E

$$\iff \forall x \in E : \exists! \ \{v_i\}_{i \in \mathbb{N}_n} \subset \mathcal{B}, \{\alpha_i\}_{i \in \mathbb{N}_n} \subset \mathbb{K} : x = \sum_{i=1}^{n} \alpha_i v_i.$$

Es decir, $\mathcal{B}$ es una base de Hamel si, y sólo si, cualquier elemento de E puede escribirse de forma *única* como combinación lineal *finita* de elementos de $\mathcal{B}$.

Temporary page!

LaTeX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because LaTeX now knows how many pages to expect for this document.
