Forma diferencial

Definición 1 (Forma diferencial). Sea M una variedad diferenciable de dimensión n, ω es una k-forma diferencial en M

$$\begin{aligned} \iff \omega\colon M &\longrightarrow \Lambda^k(T_pM) = (T_pM \times \cdots \times T_pM)^* \\ p &\longmapsto \omega_p\colon T_pM \times \cdots \times T_pM \longrightarrow \mathbb{R} \end{aligned}$$

donde ω_p es una forma multilineal alternada de grado k en T_pM.

Temporary page!

LaTeX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because LaTeX now knows how many pages to expect for this document.
