Morfismo de anillos

Definición 1 (Morfismo). Sean $(A, +, \cdot), (B, +, \cdot)$ dos anillos, $\phi \colon A \longrightarrow B$ es un morfismo de anillos $\iff$ se satisfacen las siguientes condiciones:

(i) Compatibilidad con la suma: $\forall a_1, a_2 \in A : \phi(a_1 + a_2) = \phi(a_1) + \phi(a_2)$

(ii) Compatibilidad con el producto: $\forall a_1, a_2 \in A : \phi(a_1 \cdot a_2) = \phi(a_1) \cdot \phi(a_2)$

(iii) Compatibilidad con el neutro multiplicativo: $\phi(1_A) = 1_B$

Temporary page!

LaTeX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because LaTeX now knows how many pages to expect for this document.
