

Lem automorfismos expansion parametros

Lema 1. *Sea $\mathfrak{A} = (A, z^{\mathfrak{A}})$ una L-estructura y $B \subset A$. Entonces $\text{Aut}(A_B) = \text{Aut}(A/B)$, donde A_B es la expansión dada por añadir B como parámetros.*

Demostración: Un automorfismo h de $\mathfrak{A}$ es un automorfismo de $\mathfrak{A}_B$ si y solo si, además de ser un isomorfismo de L-estructuras, preserva la interpretación de las nuevas constantes: para cada $c \in B$, $h(\underline{c}^{\mathfrak{A}_B}) = \underline{c}^{\mathfrak{A}_B}$, esto es, $h(c) = c$. Por tanto, $\text{Aut}(\mathfrak{A}_B) = \text{Aut}(\mathfrak{A}/B)$. ■

Temporary page!

L^AT_EX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because L^AT_EX now knows how many pages to expect for this document.
