

Teo singularidad evitable riemann

Teorema 1 (de Riemann). *Sea $\Omega \subset \mathbb{C}$ un dominio, $z_0 \in \Omega$ y $f \in \mathcal{H}(\Omega \setminus \{z_0\})$. Entonces, las siguientes afirmaciones son equivalentes:*

- (i) *z_0 es una singularidad evitable de f .*
- (ii) *Existe $r > 0$ tal que la función f es acotada en $B(z_0, r) \setminus \{z_0\}$.*
- (iii) *f se puede extender a una función holomorfa en Ω .*

Temporary page!

L^AT_EX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because L^AT_EX now knows how many pages to expect for this document.
