

Teo Inyectividad Landau

Teorema 1 (de inyectividad de Landau). *Sea $f \in \mathcal{H}(\mathbb{D})$ tal que $f(\mathbb{D}) \subset \mathbb{D}$ y con $f(0) = 0$. Entonces, f es inyectiva en el disco $D(0, \rho(|f'(0)|))$.*

Además, $\forall t \in (0, 1) : \exists g \in \mathcal{H}(\mathbb{D}) : g(\mathbb{D}) \subset \mathbb{D} \wedge g(0) = 0 \wedge g'(0) = t$, de manera que g no es inyectiva en ningún disco de radio mayor que $\rho(t)$. Es decir, la inclusión es óptima.

Temporary page!

L^AT_EX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because L^AT_EX now knows how many pages to expect for this document.
