

Función regular de variedad algebraica afín

Definición 1. Sea $X \subset \mathbb{A}_K^n$ una variedad algebraica afín, $f: X \rightarrow K$ es **regular**

$$\iff \exists p \in K[x_1, \dots, x_n] : \forall (a_1, \dots, a_n) \in X : f(a_1, \dots, a_n) = p(a_1, \dots, a_n).$$

Es decir, f es la restricción a X de un polinomio en $K[x_1, \dots, x_n]$.

Al conjunto de las funciones regulares en X lo denotamos por $\Gamma(X)$.
