

Las variedades difeomorfas tienen la misma dimensión

Corolario 1. *Dos variedades difeomorfas tienen la misma dimensión.*

Demostración: Sean M^m y N^n variedades diferenciables y $F: M \rightarrow N$ un difeomorfismo entre ellas. Entonces, por la propiedad `prop-direfencial-apl-diferenciable/??` de la `prop-direfencial-apl-diferenciable/??`, $DF|_p$ es un isomorfismo entre T_pM y $T_{F(p)}N$. Como $\dim T_pM = m$ y $\dim T_{F(p)}N = n$ por el `cor-dim-esp-tangente-variedad/??`, concluimos que $m = n$. ■

Temporary page!

L^AT_EX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because L^AT_EX now knows how many pages to expect for this document.
