

Medida de Lebesgue

Proposición 1 (Medida de Lebesgue). *Sea $m^*: \mathcal{P}(\mathbb{R}^d) \rightarrow [0, \infty]$ la medida exterior de Lebesgue en $\mathbb{R}^d$ y $\mathcal{L}$ la σ -álgebra de Lebesgue en $\mathbb{R}^d$*

$$\implies m^*|_{\mathcal{L}}: \mathcal{L} \rightarrow [0, \infty] \text{ es una medida completa en } \mathbb{R}^d.$$

*A esta medida se la conoce como la **medida de Lebesgue** y se denota por m .*

Temporary page!

L^AT_EX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because L^AT_EX now knows how many pages to expect for this document.
