

Variedad riemanniana

Definición 1 (Variedad riemanniana). Sea $(M, \mathcal{A})$ una variedad diferenciable de dimensión n , es una variedad riemanniana

$\iff \forall p \in M : \exists g_p : T_p M \times T_p M \longrightarrow \mathbb{R}$ producto escalar en $T_p M$ tal que

$\forall i, j \in \mathbb{N}_n : g_{ij} : M \longrightarrow \mathbb{R}$ es una función diferenciable.

$$p \longmapsto g_p \left(\left. \frac{\partial}{\partial x^i} \right|_p, \left. \frac{\partial}{\partial x^j} \right|_p \right)$$

Temporary page!

L^AT_EX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because L^AT_EX now knows how many pages to expect for this document.
