

Preservación de fórmulas universales en subestructuras

Lema 1. Sean B una L -estructura y A una subestructura de B . Sea $\varphi(x)$ (equivalente a) una fórmula universal y $a \in A^x$. Si $B \models \varphi(a)$, entonces, $A \models \varphi(a)$.

Demostración: Tenemos que $\neg\varphi$ es equivalente a una fórmula existencial (`lem-equivalencia-semanti`). Por tanto, por el `lem-preservacion-formulas-existenciales`/Lema 1, tenemos que $A \models \neg\varphi(a)$ implica $B \models \neg\varphi(a)$, luego $B \models \varphi(a)$ implica que $A \models \varphi(a)$. ■

Temporary page!

L^AT_EX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because L^AT_EX now knows how many pages to expect for this document.
