

Lem prod combinacion convexa prod finito blaschke

Lema 1. Sean f y g combinaciones convexas de productos finitos de Blaschke. Entonces, $f \cdot g$ es una combinación convexa de productos finitos de Blaschke.

Demostración: Por definición, sabemos que $\exists \{f_k\}_{k=1}^n, \{g_\ell\}_{\ell=1}^m$ productos finitos de Blaschke y $\{\alpha_k\}_{k=1}^n, \{\beta_\ell\}_{\ell=1}^m \subset \mathbb{R}_{\geq 0} : \sum_k \alpha_k = 1 \wedge \sum_\ell \beta_\ell = 1 \wedge f = \sum_k \alpha_k f_k \wedge g = \sum_\ell \beta_\ell g_\ell$. Luego,

$$f \cdot g = \left(\sum_{k=1}^n \alpha_k f_k \right) \cdot \left(\sum_{\ell=1}^m \beta_\ell g_\ell \right) = \sum_{k=1}^n \sum_{\ell=1}^m \alpha_k \beta_\ell f_k g_\ell.$$

Como f_k y g_ℓ son productos finitos de Blaschke, $f_k g_\ell$ es un producto finito de Blaschke. Además, $\sum_k \sum_\ell \alpha_k \beta_\ell = (\sum_k \alpha_k) (\sum_\ell \beta_\ell) = 1$. Por lo tanto, $f \cdot g$ es una combinación convexa de productos finitos de Blaschke. ■

Temporary page!

L^AT_EX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because L^AT_EX now knows how many pages to expect for this document.
